

ABSTRACT OF THE DISCLOSURE

A method for selecting a wireless data transmitter to convey digital data from a first device to a second device. The first device has a transmitter and the second device has a receiver.

5 A sole authentication number is assigned to the first device. A signal including the authentication number is conveyed from the transmitter of the first device and a login number corresponding to the authentication number is displayed on the second device when the receiver of the second device locates
10 the signal. The login number is input into the first device, and the login number is then conveyed from the transmitter to the receiver such that the digital data from the first device is received by the second device.
